

Digest of Education Statistics in the Russian Federation 2014

Digest of Education Statistics in the Russian Federation 2014

Editorial Board:

Grigoriy Andrushchak, Leonid Gokhberg, Alexander Kevesh, Natalia Kovaleva, Yaroslav Kuzminov, Andrey Surinov

Authors:

Gulnara Abdrakhmanova, Leonid Gokhberg, Natalia Kovaleva, Galina Kovaleva, Vera Kuznetsova, Olga Ozerova, Nikolay Shugal, Irina Zabaturina

With contributions by:

Yelena Frolova, Tatyana Gorbunova, Olga Konovalova, Nadezhda Konovka, Marina Ryazanova, Tatyana Savostyanova, Natalia Sporykhina, Andrey Tatarinov, Marina Yefanova, Zifa Zainullina

Digest of Education Statistics in the Russian Federation: 2014: statistical data book. – Moscow: National Research University – Higher School of Economics, 2014. – 74 p.

This data book is a digest of the larger publication 'Education in the Russian Federation: 2014' prepared by Institute for Statistical Studies and Economics of Knowledge, National Research University – Higher School of Economics (HSE ISSEK). It contains data on the educational attainment of the population and key trends in education in Russia. The statistical presentation of data complies with international standards. The data book uses information provided by the Federal State Statistics Service, the Ministry of Education and Science of the Russian Federation, the Federal Treasury, OECD, as well as the results of methodological and analytical studies by HSE ISSEK.

ICT USAGE IN THE EDUCATION SECTOR

6.1. Personal computers used for educational purposes per 100 students at educational institutions: 2013

(at the end of the year)

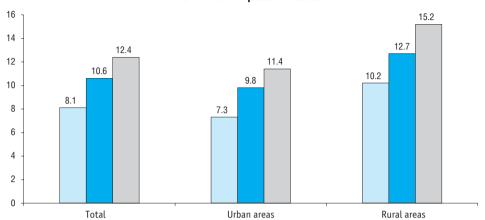

At the beginning of the academic year 2013/2014. The number of students (Ns) used in the calculation is determined by the formula: $Ns = Nf + 0.25 \cdot Np + 0.10 \cdot Nd$, where Nf is the number of fulltime students, Np is the number of part-time students, and Nd is the number of distance learning students.

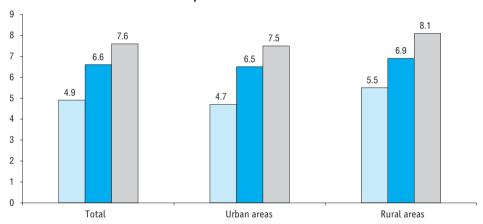

6.2. Personal computers used for educational purposes per 100 students at general education institutions (excluding part-time (shift) institutions)

(at the beginning of the academic year)

^{*} The data for foreign countries refers to 2011 of the nearest years; including state subsidies for households aimed at providing higher life quality for students and not connected with the education; the data for Russia refers to the expenditure from the consolidated budget and extrabudgetary funds.

^{**} Expenditure on ISCED 4 is partially included in expenditure on higher edcuation (ISCED 5).

^{***} Expenditure on secondary vocational education is included (ISCED 5B) in expenditure on secondary general education (ISCED 1, 2 and 3).

Average monthly nominal accrued salaries over a year are calculated by dividing the fund of accrued employee wages by the average annual number of employees and by 12. The earnings obtained by the employees from the state non-budgetary funds are not included in the wage fund and in the average monthly wage.

Average salaries of pedagogical personnel at state and municipal educational institutions are calculated by dividing the fund of accrued employee wages by the average annual number of employees and by 12. The indicator comprises staff members of these institutions, personnel working part-time on several positions within the institution, and includes bonuses paid within additional contracts concluded between the staff member and the institution. The indicator does not cover data on employees working part-time and on contracts or information on their salaries.

Availability of places in preschool education institutions (number of children per 100 places) is determined as the ratio of the number of children attending preschool education institutions to the number of places in these institutions.

Budgeting in the Russian Federation comprises federal, regional and local level budgets, and extra-budgetary funds. The federal budget is intended for the execution of liabilities of the Russian Federation. The budget of a Russian region (regional budget) is intended for the execution of liabilities of a Russian region. The *consolidated budget of* the Russian Federation comprises the federal budget and the aggregate consolidated budgets of the Russian regions (excluding intergovernmental transfers). The consolidated budget of a Russian region comprises the budget of a Russian region and the aggregate municipal budgets within the region (excluding inter-budgetary transfers between these budgets). The federal extra-budgetary funds are special funds owned by the government that are not part of the federal or regional budgets and that receive revenues from earmarked levies, possibly next to other sources such as fees and contributions from the general tax fund. There are three federal extra-budgetary funds in Russia: the State Pension Fund, the Social Insurance Fund, and the Federal Mandatory Health Insurance Fund. All three are social security funds.

Budget expenditure is money funds remitted from the budget, excluding funds that are used to cover the budget deficit according to the Budget Code of the Russian Federation.

Budget expenditure on education in the Russian Federation (public expenditure on education) is money funds allocated for financial provision of preschool and general education; lower and secondary vocational education; higher and postgraduate education; professional training, re-training and refresher training; youth policy and children's recreation; applied research in education and other purposes in the sphere of education. The related information is based on annual reports about the implementation of the consolidated budget of the Russian Federation and federal extra-budgetary funds.

A **census** is the primary source of data on the educational attainment of the population. A census is the complete enumeration of a population or groups at a point in time with respect to well- defined characteristics: for example, population, production, traffic on particular roads. In some connection the term is associated with the data collected rather than the extent of the collection so that the term 'sample census' has a distinct meaning. The last All-Russia census was conducted in the Russian Federation in 2010. The population in the census data is divided into 3 groups: younger than working age (children and adolescents under 16); working age (men aged 16–59, women aged 16–54); older than working age (men aged 60 or older, women aged 55 and older).

Consumer expenditure of households is a part of the cash outlays allocated for the acquisition of consumer goods and services. These exclude expenditure on artwork, antiques and jewellery purchased as capital investment, payment for materials and work for construction and capital repairs of residential and non-residential dwellings which can be viewed as investment.

Doctoral courses (Doctor degree programmes) – secondstage advanced research programmes corresponding to ISCED 1997 Level 6 and ISCED 2011 Level 8 (second research qualifications are not separately accounted for by ISCED) and leading to the attainment of the Doctor of Sciences degree. These are usually provided by universities, research institutes or institutions for supplementary education. Second advanced research qualifications or higher doctorates require the submission of a second substantial piece of research (further to the first doctoral thesis) usually at a considerably later stage of an academic career. The applicant for admission to doctoral courses should: 1) be engaged in education or research activities for at least five years, 2) be employed at the assigning institution for at least a year, 3) have either scientific achievements proven by publications in peer-reviewed journals, or patented inventions, 4) provide the plan of the future thesis complying with the requirements of the Nomenclature of Research Qualifications. The thesis at this level should be completed within a three-year period.

Education types in the data book are classified into formal, non-formal education and lifelong learning. **Formal education** includes education of different levels

(secondary general, secondary complete, lower and secondary, higher and postgraduate education) provided by educational institutions. In international practice, the indicator of the population's participation in formal education is used which takes into account the proportion of persons who studied at any level of the formal education system during the past 12 months in the population aged 25-64 years. Non-formal education/training covers organised educational activities which are not part of formal educational programmes: refresher courses; professional and amateur courses; vocational lectures, seminars, training (conducted at work regularly or ad-hoc); programmes of non-formal education/training at educational institutions (including MBA studies). In international practice, the indicator of population's participation in non-formal education/training presents the proportion of persons who have been obtaining non-formal education/training during the past 12 months in total population aged 25-64 years. The indicator of population's participation in formal and (or) non-formal education/training is also used, presenting the proportion of persons who participated in all organised educational activities during the past 12 months in total population aged 25-64 years. Lifelong learning encompasses all purposeful learning activities, whether formal or informal, undertaken on an ongoing basis with the aim of improving knowledge, skills and competence. The intention or aim to learn is the critical point that distinguishes these activities from non-learning activities, such as cultural or sporting activities. Data about the participation of the population in lifelong learning is presented on the basis of representative surveys of the population.

Information on the **economic activity of the population** is based on the data of surveys of the population on employment issues conducted by statistical bodies of the Russian Federation. The survey studies economic activity of the population aged 15–72.

Economically active population is the total number of employed and unemployed persons in a certain age group in the reference period.

Employed in the economy (employed individuals) are persons who in the reference period were involved in work for pay as well as for profit either with or without the participation of hired employees. The number of the employed includes persons assisting at family enterprises, those who are temporarily absent from work and also those in households who produce goods and services to sell.

Employment rate refers to the number of persons in employment as a percentage of the working-age population.

Enrolment per teacher is determined as the ratio of the number of students at an educational institution to the number of teachers (excluding multiple jobholders). For part-time (shift) general education institutions, lower vocational, secondary vocational and higher education institutions a calculated value of enrolment is based on full-time enrolment plus 25% of part-time enrolment plus 10% of distant enrolment (including the external form).

Expenditure of households on paid services in the education system comprises payment for studying at pri-

mary schools, in preparatory groups of kindergartens and schools, at secondary schools, gymnasia, lyceums (including the payment for cleaning services, attending extended-day groups (without meals), security, etc.), as well as at secondary vocational and higher education institutions. The indicator includes expenditure on education that is not specified by level, i.e., payment for educational services in vocational training (not requiring previous specialised education) and for other types of education such as courses in computer basics, foreign languages or accounting courses, etc.

Fixed investment (or fixed capital investment) refers to investment in fixed capital or to the replacement of depreciated fixed capital, i.e. investment in physical assets such as machinery, land, buildings, installations, vehicles, or technology. Since 2005 data on fixed investment is presented without VAT.

General education institutions provide primary general, basic general and (or) secondary education; they have the right to provide preschool education programmes, supplementary general education programmes, and vocational training programs. Information on the number of general education institutions does not include data on the affiliate general education institutions. Enrolment and graduates from general education institutions comprise students enrolled in primary general, basic general, and secondary education programmes, including those provided by affiliate general education institutions.

Higher education institution is an educational institution providing higher education programmes (Bachelor, Master and Specialist degree programmes) and research facilities. Information on the **number of higher education institutions** does not cover data on the affiliate educational institutions.

Informal learning is individual learning that, in contrast to formal and non-formal education, takes place outside educational establishments and is not qualification-oriented but contributes to the broadening of knowledge and skills. In international practice, the indicator of population's participation in informal education is used. It takes into account the proportion of persons aged 25–64 who have been acquiring knowledge and skills during the past 12 months on their own using printed materials (professional books, journals, etc.); technical devices (audiovisual records, computers, Internet); visiting institutions that disseminate knowledge (libraries, museums, exhibitions, theatres, cinemas, etc.); using educational TV and radio programmes); studying under the supervision of relatives, friends and colleagues.

Institutions for supplementary education provide supplementary general education programmes aimed at either general development or pre-vocational training. General development programmes are provided for both children and adults. Additional pre-vocational training in the arts, physical education and sports is provided for children.

Information on the **number of secondary vocational education institutions** does not cover data on the affiliate secondary vocational education institutions and higher

education institutions providing secondary vocational education programmes. Information on the **enrolment**, **entrants and graduates from secondary vocational education institutions** includes data on secondary vocational education programmes provided by higher education institutions.

Information on the **number of preschool education institutions** (unless otherwise specified) does not cover data on the number of affiliate preschool education institutions and separate structural divisions (branches) of general education institutions, providing preschool education programmes. Information on the **number of places in preschool education institutions** is provided with regard to the limits for the number of children in a group, established by sanitary and epidemiological regulations, as well as by the institution's charter.

Information on the **number of lower vocational edu- cation institutions** refers to institutions providing exclusively lower vocational education programmes (excluding institutions providing secondary vocational education programmes). Information on the **enrolment**, **entrants and graduates from lower vocational education programmes** covers data on lower vocational education programmes provided by higher education institutions.

Level of economic activity of the population is a percentage of the economically active population in the total population.

Literacy of the population is defined as the ability of understanding, evaluating, using and engaging with written and oral texts according to the language norms. It is indicated in the census. The literacy rate is measured as the proportion of literate persons in the respective age group.

Pedagogical personnel are natural persons employed by an educational institution and involved in planning, organising and conducting of group activities whereby students' knowledge, skills and attitudes develop as stipulated by educational programmes.

Postgraduate studies (Candidate degree grammes) - first-stage advanced research programmes corresponding to ISCED 1997 Level 6 and ISCED 2011 Level 8 and leading to the attainment of the Candidate of Sciences degree. The programmes are implemented for the fields of science and research qualifications presented in the Nomenclature of Research Qualifications. Entry to these programmes requires the successful completion of ISCED level 7 programmes and attainment of a master's or specialist's degree. A student can take a full-time, part-time or distance learning course. However, the graduation from postgraduate courses is only possible within time scales set by the educational standard (generally three years in full-time equivalent) regardless of the form of education. Persons who successfully passed the qualification examinations receive a diploma confirming the graduation from the course. Persons who also submitted and defended a thesis, dissertation or equivalent written work, representing a significant contribution to knowledge in the respective field of study, receive, in addition to the diploma, a degree of Candidate of Sciences in a certain research area.

Public expenditure on education per student by budgetary expenditure classification is estimated by dividing total public expenditure on each level of education by the number of students enrolled in the corresponding level whose education is state funded. An estimated enrolment as a full-time equivalent is used for lower and secondary vocational education and higher education.

Real accrued salaries characterise the purchasing power of salaries during the reporting period in connection with the change in prices for consumer goods and services in comparison with the base period. The index of real accrued salaries is calculated by dividing the index of nominal accrued salary by the consumer price index during the same period of time.

A **teacher** is an employee of an educational institution who is engaged in educational, scientific, organisational and methodological work.

Training area is the area of premises where an educational process is performed: premises for group studies, classrooms, lecture halls, training laboratories, training rooms, drafting rooms for preparing course and graduation papers, training shops, showrooms, premises for assembling and testing works, covered athletic facilities (all kinds of sports halls, covered swimming pools).

Use of personal computers comprises usage of computers:

- by teachers or students in class;
- by students for doing homework (diploma and course projects, during internships);
- by teachers when preparing for classes (lectures, laboratory and practical classes).

According to the definition of the International Labour Organization (ILO) the unemployed comprise all persons above a specified age who during the reference period were: 1) without work, that is, were not in paid employment or self employment during the reference period; 2) currently available for work, that is, were available for paid employment or self-employment during the reference period; and 3) seeking work, that is, had taken specific steps in a specified recent period to seek paid employment or self-employment. The specific steps may include registration at a public or private employment exchange; application to employers; checking at worksites, farms, factory gates, market or other assembly places; placing or answering newspaper advertisements; seeking assistance of friends or relatives; looking for land, building, machinery or equipment to establish own enterprise; arranging for financial resources; applying for permits and licences, etc.

Unemployment rate is a percentage of the unemployed in the economically active population.

Information on the vacancies for employees in enterprises is taken from sample surveys of institutions conducted by statistical bodies of the Russian Federation once every two years. The survey comprises institutions (excluding small businesses and institutions with less than 15 employees), engaged in all kinds of economic activities, excluding provision of financial services, public adminis-

tration and defence, and social security. Public associations and extra-territorial institutions are also excluded. The indicator comprises jobs which fell vacant because of the dismissal of employees or maternity leaves, as well as newly created job openings, which needed to be filled within 30 days after the end of the reporting period. The distribution of workers by occupation is presented according to the National Classification of Occupations, approved by the Decree of State Standard of the Russian Federation #298 from January1, 1995.

The value of funds received by an educational institution comprises sources received from budgetary and non-budgetary funds. The sources may be used for both educational and non-educational purposes. Non-budgetary funds are those received as a result of rendering services, selling goods produced within contracts, and other

receipts excluding budgetary funds. Loan funds are excluded.

The value of paid services rendered to the population in the education system is the money equivalent of services rendered to the population for child care at preschool education institutions with all forms of ownership, training at paid courses, study (hobby) groups and circles, hobby schools within general education institutions; private tutoring services, services of daytime staying camps within education institutions and other services included in subgroup 11 'Services rendered in the education system' of the All-Russian Classifier of Services Rendered to the Population. The indicator is calculated using data of the federal state statistical observation and estimates of the shadow market, as well as data on informal educational services according to approved methodological quidelines.

Russian education system via the International standard classification of education

Level by ISCED-97

Equivalent in the Russian education system

ISCED 0 - Pre-primary education

Pre-primary education is the initial stage of organised instruction designed to introduce very young children to a school environment. Pre-primary educational programmes must be carried out by personnel having appropriate qualifications, should be centre or school based, and must meet the educational and developmental needs of children over the age of three

ISCED 1 - Primary education

Primary education is the first stage of basic education. It is designed to provide basic skills in reading, writing and mathematics along with an elementary understanding of other subjects such as history, geography, natural sciences, social sciences, art, and music. In some cases religious instruction is included

Preschool education

In the Russian education system preschool education is not an educational level in the full sense. Although preschool education is school based and is designed to prepare young children for school, it is not required to be able to continue education at the next level

Primary general education

In the Russian education system this level (grades 1–4) is the first level of education in the full sense of the word, and coincides with the beginning of compulsory education. This level covers pupils of preparatory forms who are included, according to ISCED, in the pre-primary education level (ISCED 0). Successful completion of this level is sufficient to acknowledge that primary education has been attained. This level excludes special educational institutions and classes for pupils with disabilities, specialised institutions for children and adolescents with behavioural problems, and part-time (shift) institutions

ISCED 2 – Lower secondary education

Second level of education, first phase of secondary education. This level is aimed at completing basic education that began in the first level, forming a foundation for lifelong learning. The programmes at this level are more subject-oriented and teachers have more specialised training in their subject. The completion of this level often coincides with the end of compulsory school education

ISCED 3 – Upper secondary education

Third level of education, second stage of secondary education. This level of education typically begins in the latter of compulsory education in those countries where a compulsory education system exists. This level is characterized by greater specialisation compared to lower levels. Educational programmes at this level typically require the completion of a 9-year training period in full-time equivalent (beginning with the first level) or a combination of education and vocational training

Basic general education

In the Russian education system this level (grades 5–9 at general education institutions) is the second stage of compulsory education. Its successful completion coincides with the end of compulsory education and is sufficient for acknowledging that basic general education has been attained. This level excludes special educational institutions and classes for pupils with disabilities, specialised institutions for children and adolescents with behavioural problems, and part-time (shift) institutions

Secondary (complete) general education, lower vocational education

Secondary (complete) general education is the third, final stage of compulsory general education, and may be acquired either at a general education institution or, as well as at lower vocational or secondary vocational education institutions. This level includes grade 9–11(12) at full-time secondary (complete) general education institutions.

Lower vocational education is included in this level irrespective of whether or not the students have received a certificate of secondary (complete) general education

(continued)

Level by ISCED-97

Equivalent in the Russian education system

ISCED 4 - Post-secondary non-tertiary education

Fourth level of education, post-secondary, non-tertiary education. Programmes at this level are on the border of upper secondary education and first stage tertiary education. Content-wise they are often not significantly more advanced than level 3 and are aimed at broadening the students' previous knowledge. They are more specialised and detailed and include more complicated practical studies

This may be assigned to vocational training that is not accompanied by an improvement of educational attainment (vocational courses: computer, accounting, secretary courses, etc.). Preparatory courses established with the purpose of obtaining admission to higher education institutions also may be included. There is little data available on this level. This may also include training at lower vocational education institutions for students with secondary (complete) general education. In this case it is advisable to classify such programmes as second stage of secondary education

ISCED 5B - Tertiary-type B education

Fifth level of education, first stage of tertiary education, 5B programmes.

These programmes do not lead directly to an advanced research qualification but provide practical vocational training

ISCED 5A - Tertiary-type A education

Fifth level of education, first stage of tertiary education, 5A programmes.

These programmes do not lead directly to an advanced research qualification but provide theoretical (research) training that secures a high level of vocational specialization

ISCED 6 - Advanced research programmes

Sixth level of education, second stage of tertiary education. These programmes lead directly to an advanced research qualification

Secondary vocational education

This level provides secondary vocational education at secondary vocational education institutions and at higher education institutions, implementing secondary vocational education programmes

Higher education

This level allows students to receive higher education at higher education institutions

Postgraduate education

Training in postgraduate and doctoral courses
