S40 **Science and Technology. Innovation. Information Society**: Pocket Data Book / G. Abdrakhmanova, N. Gorodnikova, L. Gokhberg et al.; National Research University Higher School of Economics. Moscow: HSE, 2015. – 80 p. – 300 copies. – ISBN 978-5-7598-1295-1 (pbk).

The pocket data book contains main indicators characterizing S&T, innovation and Information Society in the Russian Federation.

The data book includes information of the Federal State Statistics Service, Federal Service for Intellectual Property, Organisation for Economic Co-operation and Development (OECD), Eurostat, UNESCO, World Intellectual Property Organisation, national statistical services of foreign countries, and results of own methodological and analytical studies of the HSE Institute for Statistical Studies and Economics of Knowledge.

In some cases, the presented data specify those published earlier.

The book was prepared within the framework of the Basic Research Program at the National Research University Higher School of Economics (HSE) and supported within the framework of the subsidy granted to the HSE by the Government of the Russian Federation for the implementation of the Global Competitiveness Program.

Peaceful use of outer space	4
Interaction of citizens with public authorities	2

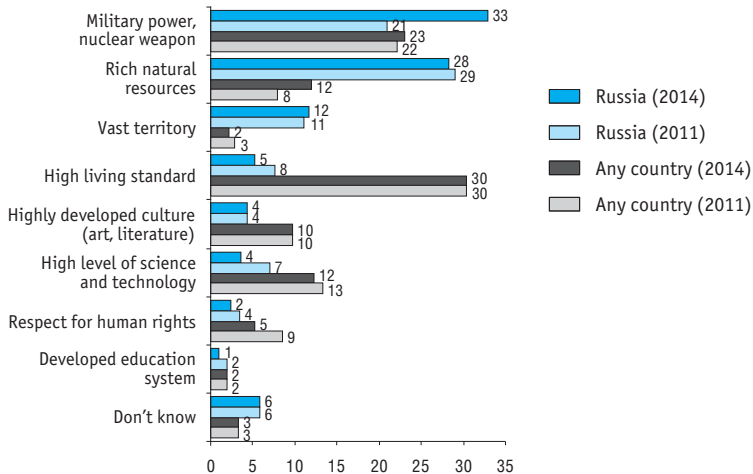

* This section presents data from the public opinion surveys of population aged 16 and older (for 2009 – 18 and older).

** The sum exceeds 100% because respondents could give several answers.

7.2. Symbols of national prestige in Russia

(as a per cent of the total number of respondents)

What should a country primarily possess to be respected by other nations? What is now the primary reason for other nations to respect Russia?

7.3. Public opinion on science, technology, innovation, and education development: 2014

(as a per cent of the total number of respondents)

In comparison with other advanced countries, is Russia stronger or weaker in the following fields?

7.4. Public opinion on the factors of economic growth

(as a per cent of the total number of respondents*)

In your opinion, what is the main factor of economic growth in Russia?

* The sum exceeds 100% because respondents could give several answers.

** This option was added in 2014.

Technical Notes

Bibliometric indicators are calculated on the basis of Scopus and Web of Science databases. Publications considered include scientific articles, conference papers and reviews. A publication is associated with a country if it is listed in the affiliated address of author or one of co-authors.

Federal budget appropriations on civil S&T – federal budget funds allocated for civil-purpose basic and applied scientific research.

Gross domestic expenditure on R&D – actual expenditure on research and development performed by organisations during the reference year irrespective of financing sources, expressed in a monetary form.

Information and communication technologies (ICT) – the types of technologies using microelectronics for collection, storage, processing, retrieval, transmission, and presentation of data, texts, images, and sounds.

Marketing innovation is the implementation of a new or significantly improved marketing method involving significant changes in product design or packaging, product placement, product promotion or pricing.

Number of personnel in full-time equivalent is the indicator which reflects the sum of timeshares actually spent by R&D personnel on R&D activities and is measured in person-years.

Organisational innovation is the implementation of a new organisational method in the firm's business practices, workplace organisation or external relations.

R&D personnel are professionals whose creative activities are aimed at the advancement of scientific knowledge or search for new areas of its application, as well as direct services related to performance of R&D.

Researchers are professionals engaged in R&D and immediately performing the creation of new knowledge, products, processes, methods, and systems, as well as in the management of these activities. Researchers usually have higher education (university or equivalent) degrees.

Technological innovations are the final result of innovative activities, embodied in a technologically new or improved good or service introduced on a market, a technologically new or improved process or technique of service production (transfer) used in practice.

The technology balance of payments registers the volume of commercial transactions related to international technology and other intangible assets transfers (exports and imports).
